Raycell® Mk2
X-ray Blood Irradiator
2.0 L or 3.5 L Canisters
A Convenient Choice for Blood Irradiation

Efficient, convenient and user friendly, the Raycell® Mk2 X-ray Blood Irradiator provides a safe and cost-effective choice for blood irradiation – backed by Best® Theratronics’ trusted expertise and commitment to quality. It delivers the required dose to help prevent TA-GVHD.

Raycell® Mk2 Features

• Larger canister size facilitates irradiating more blood bags – 2.0 L and 3.5 L (0.53 and 0.92 US Gallons)

• Two opposing x-ray tubes deliver a uniform dose to the product

• Dose delivery is controlled by setting and monitoring the irradiation time, based on the central dose rate

• Irradiation time is controlled by two independent microprocessors

• Detailed dosimetry of the sample canister volume is obtained and provided at the time of installation

• Installation can take 1-3 days depending on individual installation and training requirements
**Technical Specifications**

**Weight**
1,000 kg (2200 lbs)

**Floor Loading**
111 kg/cm² (1580 lbs/in²)

**Dimensions**
- Height: 1525 mm (60 in)
- Width: 1450 mm (57 in)
- Depth with Shelf: 1000 mm (40 in)
- Depth without Shelf: 800 mm (32 in)

**Electricity Requirements**
- Single-phase: 60 Hz, 60A typically at 240V
- Three-phase: 50 Hz, 25A typically at 400V

**Photon Energy**
- 160 KV (60-80 keV average)

**Water Requirements**
- Flow Rate: >10 L/min (2.6 US gal/min)
- Potable Quality: ≤ 7 grains/US gal hardness
- Pressure: 35-60 psi (241-414 kPa)
- Temperature: 10-25 °C (50-77 °F)

**Additional Options**
- IPDM System
- Heat Exchanger (included by default)
- Service Agreements
- Irradiator Verification Indicators
- Additional Canisters
- Chiller
Irradiated Products Database Management (IPDM) System Features (Optional)

- Scans and stores bar-coded information about the irradiated product (unit number, product code, blood type, etc.), irradiation cycle number, operator details, date/time stamp, and irradiation indicator verification
- Scans barcodes using ISBT 128\(^1\) and ABC Codabar\(^2\) decoders, or as is without decoding
- Includes three modes of operation: product entry, cycle database review, and administration
- Performs additional verification of the irradiation time
- Stores up to 10,000 cycles or 50,000 product entries of data in main database and archives the rest
- Exports data conveniently onto a USB memory stick (1 stick provided, 2 USB ports)
- Ensures efficient, error-free operation

2. ABC Codabar: Based on the US FDA “Guideline for the Uniform Labelling of Blood and Blood Components” – August 1985
Superior Performance and Unparalleled Dose Uniformity

X-rays are produced by bombarding targets with electrons, which are accelerated in a vacuum through a high-voltage electrical field. The dose is delivered by two opposing X-ray tubes with the sample canister located centrally between them. The two cone-shaped beams ensure a tight dose is delivered to the product and that exceptional dose uniformity is attained.
Healthcare For Everyone

Best® Theratronics’ products and services are used throughout the world to prevent, diagnose and treat disease. Our applied research and innovation play an integral part in improving global healthcare.

“Our TeamBest™ companies are committed to making quality healthcare affordable and accessible globally.”

Krishnan Suthanthiran
President, Best Medical International

Best® Theratronics Ltd. is a member of TeamBest™
– a family of Best® Medical companies.

From brachytherapy seeds and equipment, dosimetry kits, phantoms, treatment planning systems, an array of medical/health physics equipment, and product remanufacturing/servicing, to radioactive sources, gamma teletherapy machines, cyclotron systems, and particle therapy treatment, TeamBest™ has it all!
