BG-75 BIOMARKER GENERATOR

## BG-75 BIOMARKER GENERATOR

The BG-75 Biomarker Generator is a revolutionary development in radio-pharmaceutical production that delivers a single or batch dose of [18F]FDG, and additional advanced [18F] biomarkers, “on demand”. The system provides integration of all components needed to produce and qualify PET biomarkers into a single, self-contained system that occupies a fraction of the space required by conventional solutions, simplifying the implementation of PET.

### Simple Integration

The BG-75 Biomarker Generator integrates a compact mini-cyclotron, kit based micro-chemistry, and automated quality control, simplifying in-house production of [18F] FDG and advanced biomarkers.

- Push button graphic interface
- Kit based chemistry
- Single or batch dose production
- Final dose delivery to syringe or vial (option)
- Automated quality control testing
- Integrated cyclotron & chemistry self-shielding
- Complete production lab in a 30<sup>2</sup>m area

### Economical Solution

The BG-75 Biomarker Generator provides a unique, affordable, and powerful alternative to conventional cyclotron solutions.

- 30<sup>2</sup>m area vs 300<sup>2</sup>m reduces build-out costs
- QC automation reduces specialist support
- 1-2 FTE vs. 4-5 FTE reduces operational costs
- Lower radiation minimizes regulatory burden

## Fully Integrated Design

The BG-75 Biomarker Generator system integrates a 7.5 MeV cyclotron, Chemistry Production Module (CPM), and Quality Control Module (QCM) for on-site production of [18F]FDG, providing automated production and quality control testing. Both the cyclotron and chemistry modules are self-shielded, reducing radiation to <1 mR/hr at the minimum 5.5m x 5.5m room boundary.

Due to the system's small footprint and self-shielding, the BG-75 Biomarker Generator can be easily incorporated into an existing clinical or research setting, adjacent to PET imaging equipment if needed. By contrast, standard PET biomarker laboratories produce batches of positron-emitting isotopes in a conventional medical cyclotron, which poses a far greater radiation burden requiring significant physical containment of both the cyclotron and all downstream processing steps. Typically, a concrete-reinforced

bunker is specially built to contain the cyclotron, with separate "hot" labs dedicated to radiochemistry and QC, and several highly specialized staff to operate the cyclotron and perform the complex functions. In comparison, the BG-75 Biomarker Generator is scaled for a single engineer/operator, occupies 1/10 the space, requires little infrastructure modification, and has embedded chemistry and QC processes that greatly simplify the entire radiopharmaceutical production cycle.

These features translate into significantly less capital investment initially, and lower ongoing operating costs compared to conventional PET biomarker laboratories. Additionally, due to its self-contained design and lower energy, decommissioning the system at the end of its useful life is much simpler and far less costly. Overall, the total cost of ownership for the Best ABT BG-75 Biomarker Generator is less than 1/4 that of conventional cyclotron solutions.

## Automated Production

The BG-75 Chemistry Module greatly simplifies the workflow associated with radiopharmaceutical production by miniaturizing and automating the processes for biomarker radiolabeling and quality control. The system is provided with the necessary consumables for daily operation including Dose Synthesis Cards and Reagent Kits for biomarker synthesis, and maintenance, cleaning, and SST cards for quality control calibration.

The [18F]FDG production kit contains two different size daily Reagent Kits to meet your site's needs, and support scalability. The standard [18F]FDG Chemistry Module supports clinical [18F]NaF dose production, and Best ABT is developing optional kits and modules for [18F]FMISO, [18F]FLT, and [18F]F-Choline. The BG-75 Biomarker Generator can also be interfaced to several OEM PET synthesis modules to produce a comprehensive list of [18F] biomarkers for research applications.

True to its vision of expanding the use and usefulness of PET around the globe, Best ABT seeks to fully support both prospective and committed customers throughout the entire lifecycle of the client relationship. Recognizing that many Best ABT customers may be new to PET, and the unique logistical as well as regulatory considerations in evaluating and implementing technology that involves radioactive drugs, Best ABT offers a comprehensive suite of services that enables customers to maximize value from their investment.

## **FACILITY REQUIREMENTS**

**Minimum Room Size**  
5.5m x 5.5m

**Electrical Supply**  
220 – 250 VAC, 100A

**Chilled Water Supply**  
7°C ± 3°C

### **Early Stage Project Support**

Financial and business plan development

### **Drug Regulatory Consultation**

Support for documenting Pharmacopeia compliance

### **Device Regulatory Consultation**

Product registration for importation

### **Site Readiness Planning**

Architectural and utility requirements, construction planning and inspections

### **Logistics Planning & Export Control**

Partnerships available for export/import logistics

### **Supply Channel Development & Execution**

Tools for forecasting and managing consumables inventory

### **Applications “BG-75 Operator” Training**

Dose-cycle planning, clinical workflow, QC record keeping

### **Technical “BG-75 Engineering” Training**

System maintenance, troubleshooting and process monitoring

### **Technical Support & Service**

Ongoing technical support and service, both in the warranty period and afterward
