Kitsault Energy: A Nation-Building Opportunity to Increase Canada's GDP, Exports, and Global Competitiveness

Open Letter to PM Narendra Modi, PM Mark Carney, Members of Indian and Canadian Parliament, Provincial/Territorial/First Nation Leaders, and Industry Partners, from Dr. Krishnan Suthanthiran, Founder/President of Kitsault Energy

NEW DELHI -- (BUSINESS WIRE) -- As global demand for energy, critical minerals, agricultural products, and strategic supply chains continues to grow, Canada has an opportunity to become one of the world's leading exporters of natural resources and value-added products. Achieving this requires bold infrastructure investments, faster project approvals, and a long-term national vision.

Since January of 2013, Kitsault Energy (KE) has been developing such a vision.

KE proposes development of a dedicated energy and commodity export corridor connecting Port Churchill in northern Manitoba to Kitsault Port on British Columbia's northwest coast, establishing the largest port along the Alice Arm from Observatory Inlet.

This corridor would create a new gateway to Asian and European markets and has the potential to export:

- Nuclear energy
- Liquefied natural gas (LNG)
- Natural gas liquids (NGL)
- Canadian crude oil
- Potash
- Uranium
- Critical minerals
- Canola and pulse crops

The proposed Kitsault Energy corridor represents an opportunity to increase Canada's GDP and generate sustained economic growth.

The KE corridor represents an opportunity to increase Canada's GDP and generate economic growth through:

- Billions of dollars in private-sector investment
- Thousands of construction and skilled jobs
- Increased international exports—particularly to Asia, Europe, and Russia
- Higher federal and provincial tax revenues
- Increased economic participation with First Nation communities through long-term partnerships, new housing, Pro Health Centers, jobs and job training

By expanding export infrastructure, Canada can strengthen energy security for allies while creating long-term economic benefits at home. KE believes Canada has the resource base and market opportunities to increase crude oil exports from approximately 5-5.5 million barrels per day to 10 million barrels per day, and to quadruple current LNG and NGL exports.

The U.S. demonstrates what's possible when energy resources are supported by timely infrastructure development and investment. Over the past 20 years, U.S. crude oil production has grown to nearly 14 million barrels per day, making it the world's largest crude oil producer. The U.S. has also become the world's largest exporter of LNG, with export capacity of approximately 110 million tonnes per year.

KE has long been ready to take the lead on this energy corridor, an initiative that could help address India's environmental and energy challenges.
